

NEW PORTAL FEATURES - DESTRUCTIONS PORTAL

How it all works...

Clients select which stock within they wish to destroy by moving it into scrap inventory.

Our returns team who manage destructions receive an automated email alert that stock has been requested for destruction. They then create a destruction manifest entering detail about the client, description, due date and then add the requested stock to the manifest.

Once this manifest is complete the client receives an automated email requesting they check over the manifest containing the stock for destruction and electronically sign through the Portal that the list is correct and they are happy to proceed.

Once signed by the client our QA team are then prompted to also check through the details and sign the stock off for destruction as the final check from the 3 steps (shown with green lights on the Portal).

The returns team then arrange and carry out the stock destruction and then upload the paperwork confirming the physical destruction of stock which the client can go into the portal and download/print off a copy when required.

Clients can now raise destructions in the Portal

Portal Destructions allow clients to raise destruction requests and watch their requests go through the whole process until completion; QA administration and all documentation of the whole process are available within the destruction Portal section.

Partner Portal has been built in a modular way to allow elements to be added or removed by individual user. Our IT team recently created an extra feature; the ability to raise destruction requests through the Portal. Each client has the option of adding any portal section at the click of a button.

How clients benefit from managing destructions through the Portal

- 1) Full visibility of destructions progress whenever & wherever you need it
- 2) Clear understanding & visibility of when product has been destroyed and status changes in the warehouse
- 3) Full documentation trail with downloadable copies
- 4) Remote QA controls
- 5) Increase efficiency and convenience.

Take a look...
